This is a special bundle product made for 3G Sports

GmbH. Package contents:

- VX7 Holster for Laugo Alien
- X-Ray Egon hanger
- Y-plate and mounting hardware (pre-installed)
- VX7 Spacer for X-Ray

Congratulations on purchasing a premium quality product manufactured by VX7 Innovations AB in Sweden. All of our products are hand-made, and all raw materials are the best quality that sourced from all over the world. If you are not fully satisfied with your product, please contact us.

RETENTION & ADJUSTMENTS

Your new holster is shipped assembled, and checked for a good fit with the intended firearm. All our products use Torx type fasteners (commonly TX10 for small magazine carriers and TX20 for holsters and large magazine carriers). Retention is how *tight* (or *loose*) the holster holds the gun in place. This *tightness* is adjustable by making small changes to the Torx screws by the trigger guard.

IMPORTANT!

Once you have found the perfect retention for you, it is important that all screws be locked in place with a non-permanent thread locker such as "Vibra-Tite", "Loctite blue" or similar (not included in package).

MOUNTING & ATTACHMENT

All VX7 holsters features a "universal" mounting pattern on one side of the holster (which implies you have to order the holster as either left- or right hand). This universal mounting pattern allows you to mount your holster to most of the common and popular hangers available on the market today (others may require an adapter of sorts). You will need to use at least 2 mounting points, 3 is preferred.

The mounting kit (screws, spacers and posts) should be included with the hanger you bought (not this holster). If you are missing mounting screws, please reach out to VX7, we can assist you with that.

The post (part with the threading on the inside) is inserted from the inside of the holster towards the outside. Then on the outside of the holster you will use the spacers (if needed) followed by the hanger or adapter. Lastly it all gets bound together using the screw that will pass through the hanger/adapter and thread into the post. Remember to lock it in place with a thread locker.

VERY IMPORTANT!

After attaching your new holster to your hanger or adapter of choice, check that none of the mounting screws protrude through the post towards the inside of the holster. If one or more mounting screws are too long and protrudes to the inside it may cause scratches to your handgun. VX7 takes no responsibility for how you mount or use your holster and any subsequent damages. We are however happy to assist and advise you or to swap out any screws for different sizes if needed, so please reach out before damaging your gun.

CARE & CLEANING

Kydex products are extremely durable and should provide many years of service if you take care of yours. If you have any specific questions, please contact us.

DO:

- Clean with a mild soap and water. A normal "wet wipe" will also work well.
- For lubrication, use only silicone lubricants. We recommend "CRC Silicone Spray".

DO NOT:

- Never use any abrasives or harsh chemicals on your Kydex product!
- Never leave your Kydex products in a very hot area.
- Never try to use your Kydex product for anything other than it's specific purpose and intended fit.
